WaterVital®

"Refreshes your water"

Structured water technology
based on molecular resonance.

What is Water Vital® technology?

“Living” water technology.

Based on the natural properties of water.

There is no alternative or similar technology.

The principle of molecular resonance is used.

“Smart fluid”, which is located inside the Water Vital devices, does not come into contact with the water to be purified, it ensures the water restructuring on the basis of the resonance principle.

Water and food acquire their natural structure (*hexagonal*) with Water Vital devices. The problems of the formation of calcareous deposits and corrosion, the spread of bacteria in water are became solved thanks to this natural technology, that also allows to obtain economic benefit in industrial use.

The Water Vital system and equipment do not require maintenance personnel and an energy source. Also this system does not need maintenance service, there are no consumables, it does not require repair. Delivery and installation is very simple. The technology is non-waste, effective and is widely used in more than 55 countries around the world. Technology is also environmentally friendly and safe for nature and supported by environmentalists.

Water Vital devices for creating “living water” are not purification, not filtration, not magnetization, not ionization, not water softening system.

Features of "living" water technology Water Vital®

Structured water is the arrangement of individual water molecules where six units of H₂O are sequentially connected and form an **hexagonal** structure.

Living water has a surface tension of **18% less**, water is softer and more saturated with oxygen.

In "*living*" water anaerobic bacteria (harmful bacteria) die, while the original, natural structure of water serves to strengthen aerobic bacteria (**good bacteria**).

In structured water the calcium carbonate is destroyed which leads to the **dissolution of limestone** and reduces the formation of calcareous deposits.

The magnetic tie between water molecules and metal ions is became weak so that the **corrosion effect decreases** by a factor of **24**.

Water can save and transmit **information** about all chemical elements, which were ever presented in water before filtration. This information about even gone harmful elements is stored by **electromagnetic vibrations**. Water Vital equipment completely cleans water from this *negative information* by creating structured water.

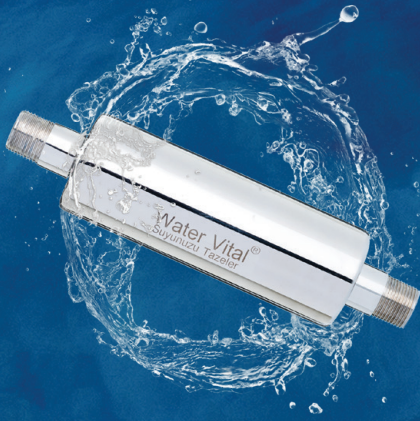

With Water Vital equipment you get natural, **healthy water** and solve the problem of poor quality water for personal use and for industrial purposes.

Using Water Vital equipment increases **energy efficiency**, reduces water consumption, waste and chemicals, and helps protect the **environment and nature**.

With the help of Water Vital devices you get real "**living water**", balanced in composition and having the same structure as natural water.

Pipe Type Systems

Industrial pipe type system is one of the devices developed by Water Vital for the production of structured water to be used in the kitchen, in the bathroom, for washing machines and dishwashers, in toilets, for cleaning purposes, for heating or cooling systems, for swimming pools, and also as drinking water.

Water Vital pipe systems are easily and quickly installed on the main water supply line. There are several different models of pipe type systems, depending on the diameter of pipes, the amount of water consumed and flow rate, the water pollution factor and area of application.

M300 3"

flow rate
100 m³/hour

M250 2,5"

flow rate
75 m³/hour

M200 2"

flow rate
50 m³/hour

M150 1.5"

flow rate
15 m³/hour

M100 1"

flow rate
10 m³/hour

M34 3/4"

flow rate
3,5 m³/hour

Examples of installation of Water Vital® industrial pipe systems

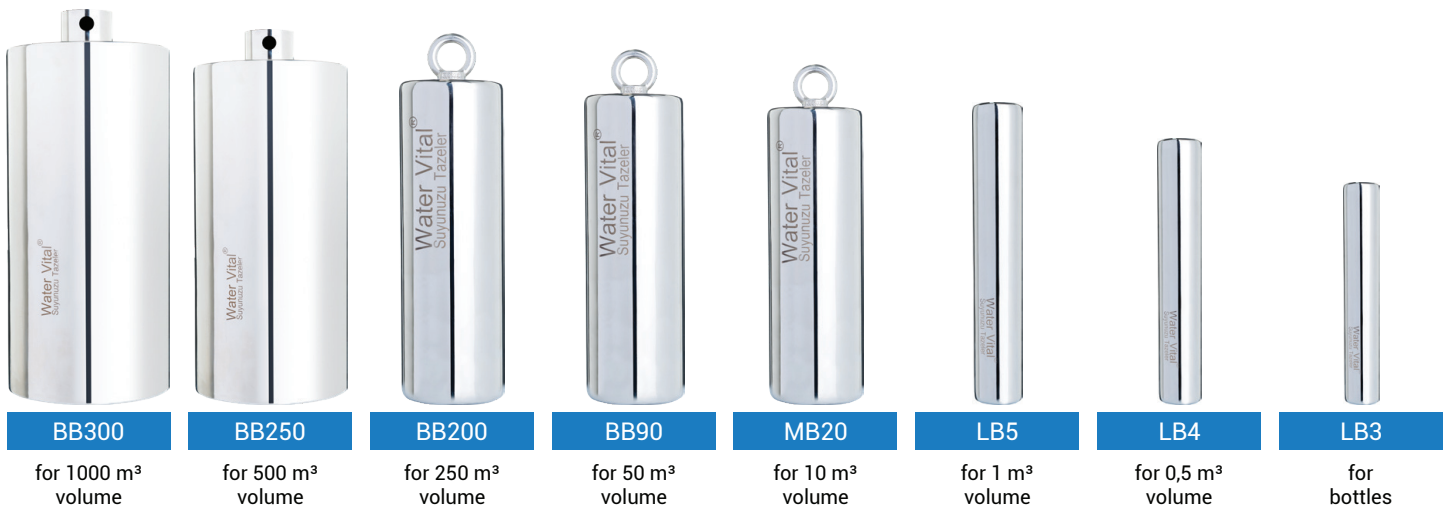

Submersible Type Systems

Water Vital® offers *industrial submersible type* (in a tank) systems (in the form of steel cylinders) for wells, reservoirs with water, baths, ponds, lakes, pools, artificial ponds, aquariums. Submersible type systems can be used as a single cylinder, or double.

The Water Vital system makes water "*living*", restores its correct structure, improves the quality of the water itself in industrial quantities and for industrial purposes.

"*Smart fluid*", which is located inside the Water Vital devices, does not come into contact with the water to be purified, it ensures the water restructuring on the basis of the *molecular resonance* principle.

Examples of installation of Water Vital® industrial submersible systems

Energy Pen (Personal Use)

Water Vital **Energy Pen** will allow you to make any drinking water “*living*” and restore water structure at any time in any place.

Energy Pen is designed for personal use for those who care about their health.

Before you drink, just dip the **Energy Pen** into a glass of water or a drink for a while, allowing the water to transform, adopting the perfect structure.

Energy Pendant (Personal Use)

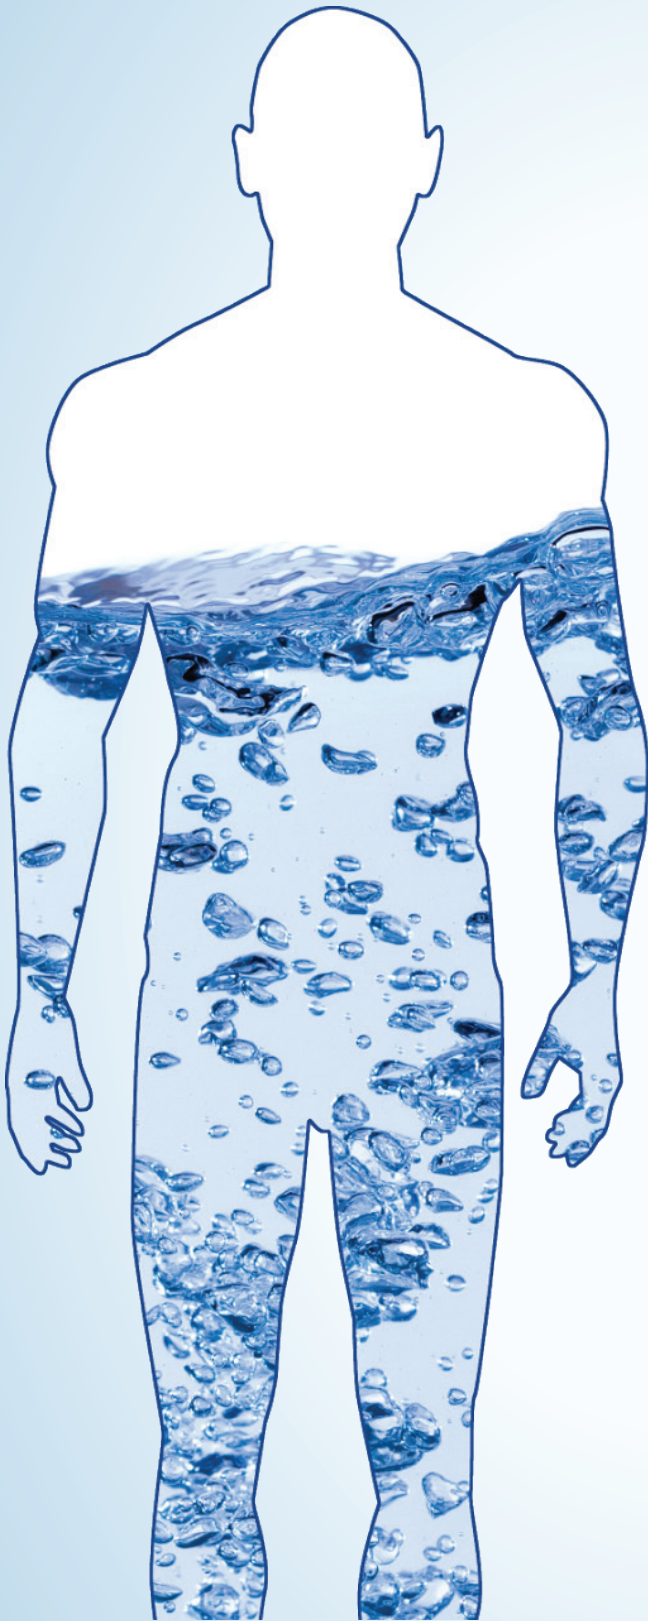

Water Vital **Energy Pendant** allows water in your body to maintain a healthy structure and stay your body energetic and resistant to negative frequencies. The Energy Pendant enhances your personal energy by strengthening your *body's own energy* centers and creating a natural defense field.

Energy Pendant has a stylish design, you can also wear it over clothes.

Daily use of the Energy Pendant will make your body strong and healthy, you will be full of energy.

Functions Of Water In The Body

Water is called the “universal solvent” because it is capable of dissolving more substances than any other liquid.

Water helps the kidneys remove wastes from your blood.

Water helps keep joints lubricated.

Water is important for healthy digestion.

Water plays a role in the distribution of oxygen to all parts of the body. It improves blood oxygen circulation.

Water helps with nutrient absorption by dissolving vitamins, minerals, and other nutrients from your food and then delivering these vitamin components to the rest of your body for use.

It helps maximize physical performance.

Regulates body temperature.

Water helps keep your skin hydrated and may promote collagen production.

Areas of application of Water Vital® technology

Water softening

Water Vital® water structuring technology can be used in water softening systems to extend the life of such systems, as well as to save energy and salts.

Sewage systems

Improves the sewage systems, reducing the amount of bacteria and bad odor, creating a healthier ecological environment.

Heating, cooling, steam systems

Thanks to the equipment of Water Vital, the formation of lime, rust, scale is reduced, and the efficiency of using energy and chemicals is increased.

Use of chemicals

Reducing the surface tension of water in reduces the consumption of chemicals in different industries and increases their effectiveness.

Swimming Pools

Water Vital makes water in swimming pools healthier and safer, improves the color and transparency of water, reduces the consumption of chemicals for swimming pools, reduces the growth of bacteria.

Sauna and spa

Structured water makes hair and skin more shiny, soft, smooth, the quality of steam and water rises, the efficiency of procedures in saunas increases, the growth of bacteria is prevented.

Plants and landscape

Structured water makes the structure of plants stronger, better assimilates iron from the soil, increases flowering, plants are less likely to get sick, and the need for fertilizers decreases.

Autoclave

Reduces the formation of rust and limestone, increases the lifecycle and efficiency of the autoclave, provides better hygiene of sterilized items.

Printing House

The colors and contrast of the print are saturated, the speed of drying is increased, the consumption of paints is reduced, the spread of bacteria in the water and the formation of corrosion is prevented.

Kitchen and food

Food becomes more delicious, fragrant and healthy, longer remain fresh. The maintenance intervals for the kitchen equipment are increased.

Meat and meat products

The use of structured water as a washing water improves the quality of meat, enhances the taste and prolongs the shelf life, and reduces salt intake for brines.

Beverages

Beverages from living water are more aromatic, the taste is more mild and dense, bubbles of carbon dioxide are reduced in size, the fermentation rate increases.

Milk and dairy products

Structured water improves the taste of milk and dairy products, reduces the need for chemicals for cleaning the equipment of the dairy industry.

Health

Structured water allows you to achieve a balance of processes in the body, remove the increased acidity of body cells, improve the delivery of oxygen, increase the body's resistance to harmful effects.

Flour production

The maintenance periods of equipment for flour production is increasing, energy saving is achieved, bran is better separated from wheat, which allows to obtain more white flour with a high shelf life.

Bakery products

The dough becomes homogeneous and reveals the full taste of wheat, the use of yeast is reduced to 20-30%, baking for a long time remains fresh, fragrant and does not crumble.

Agriculture

Structured water increases the rate of mineral dissolution in the soil, plant growth accelerates, yields increase, plants become less sick, fertilizer and chemicals consumption decreases.

Laundry

The linen becomes softer, cleaner, the consumption of washing powder and conditioner decreases, the smell of waste water is neutralized, the formation of limestone is reduced.

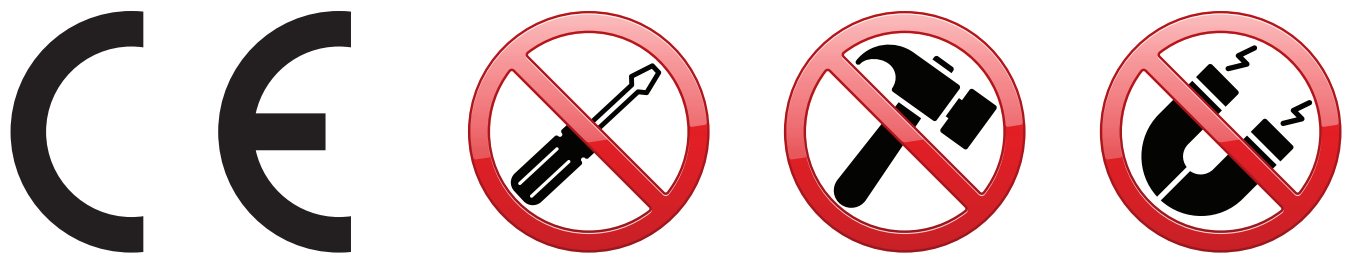

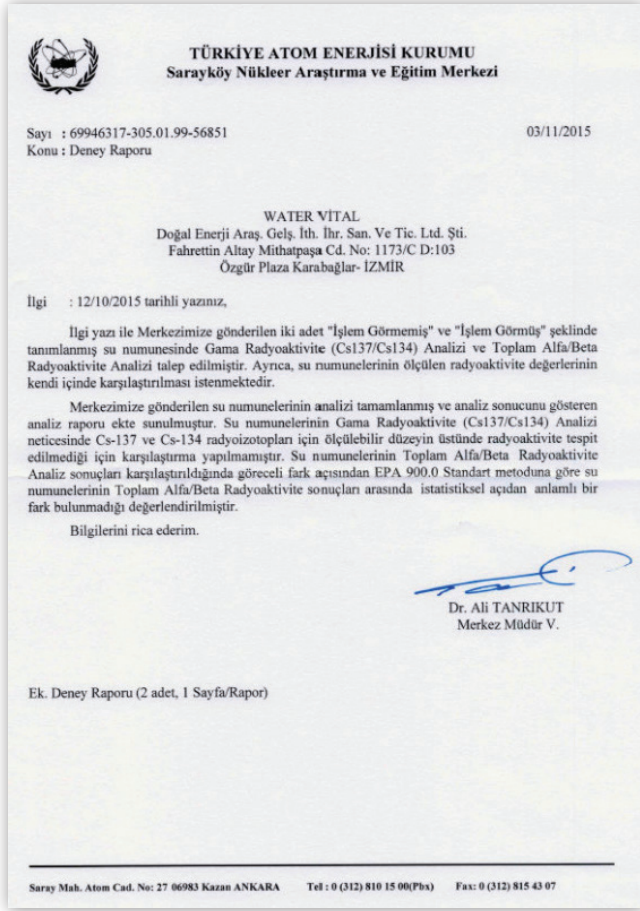

Cattle Breeding

Improves the health of animals, the coat becomes more shiny, the weight of the animal increases, and the birth rate increases. The formation of odors in the stable is greatly reduced.

Poultry farming

The need for vitamins for birds decreases, they become more alive, more dynamic, and the mortality rate drops. Increased water consumption and reduced feed intake.
